

Azimut discovers a new copper-molybdenum zone at Rex, Nunavik, Quebec

Symbol: AZM.TSX Venture

LONGUEUIL, QC, July 22, 2011 /CNW Telbec/ - **Azimut Exploration Inc** ("**Azimut**" or "**the Company**") (TSXV: **AZM**) announces the discovery of a new mineralized 1.5-km-long copper-molybdenum zone on its 100% owned Rex property in Nunavik, northern Quebec. This latest zone (the **Robinson Zone**) further supports the excellent exploration potential for large-scale polymetallic deposits in a region considered by Azimut to be a new mineral belt of major importance.

Azimut's systematic targeting efforts in Quebec led to the acquisition of a controlling land position along a 330-km prospective trend in Nunavik, represented by its Rex, Rex South and NCG properties totalling 13,133 claims over a 5,708 km² surface area (see press release of March 31, 2011).

The discovery of the Robinson Zone is the result of prospecting work that followed up on an in-fill lake-bottom sediment survey performed by Azimut in 2010. The zone has been recognized over a strike length of 1.5 km and a width of 30 to 130 m, and remains open in all directions. Mineralization, mostly represented by chalcopyrite (up to 5%), molybdenite (up to 1%) and pyrite, is hosted in a biotite-rich granite with porphyritic and pegmatitic facies. The dominant alteration type is silicification. Mineralization has been confirmed using a portable X-ray fluorescence (XRF) analyzer. Laboratory analyses are pending.

The extensive exploration program underway on the Rex, Rex South and NCG properties can be summarized as follows:

- At Rex (5,672 claims), work includes comprehensive prospecting and 3,000 m of drilling.
- At Rex South (2,044 claims), work includes comprehensive prospecting and 7,000 m of drilling. Azimut's key partner, **Aurizon Mines Ltd**, is the operator.
- At NCG ("Nunavik Copper Gold" 5,417 claims), ongoing work includes an in-fill lake-bottom sediment geochemical survey and reconnaissance prospecting.

On-site field operations at Rex and NCG are managed by Azimut's senior project geologist, François Bissonnette, P.Geo. This press release was prepared by Jean-Marc Lulin, P.Geo., acting as Azimut's Qualified Person under NI 43-101.

Azimut is a mineral exploration company with the objective of discovering major ore deposits. The Company's core business is project generation using cutting-edge targeting methodologies, along with partnership development. Azimut holds the largest mineral exploration portfolio in Quebec, including key gold, copper, uranium and rare earth element properties.

Neither TSX Venture Exchange nor its Regulation Services Provider (as that term is defined in the policies of the TSX Venture Exchange) accepts responsibility for the adequacy or accuracy of this release.
